

ExoDx™ Prostate Test

AT-HOME COLLECTION KIT

The ExoDx Prostate Test is a simple, non-invasive urine test that can discriminate the risk of aggressive prostate cancer (defined as Gleason Score ≥ 7). And now the test is available as an **At-Home Collection Kit** that can be initiated by an electronic order signed by the physician and sent directly to the patient's home for self-collection.

Ordering the At-Home Collection Kit is simple:

- **For current healthcare providers:** Simply complete the [HIPAA Compliant Electronic Order Form](#). 
- **For new healthcare providers:** A site ID must be provided by our Client Services Team, who can be reached at **844.396.7663** (Option 3, then Option 2)
- Populate the patient's name, address, and DOB – we do the rest!
- Exosome Diagnostics provides free shipping via FedEx
- Need help? [Request a meeting](#). 

And remember, there's **no extra cost** for the At-Home Collection Kit!

Get test results quickly and easily

- Results of the ExoDx Test will be sent electronically through a HIPAA- compliant, safe, and secure online portal
- Results can be expected back in 3 to 5 days from sample receipt
- Result interpretation and support is available 5 days a week

Benefits of the ExoDx Prostate Test At-Home Collection Kit:

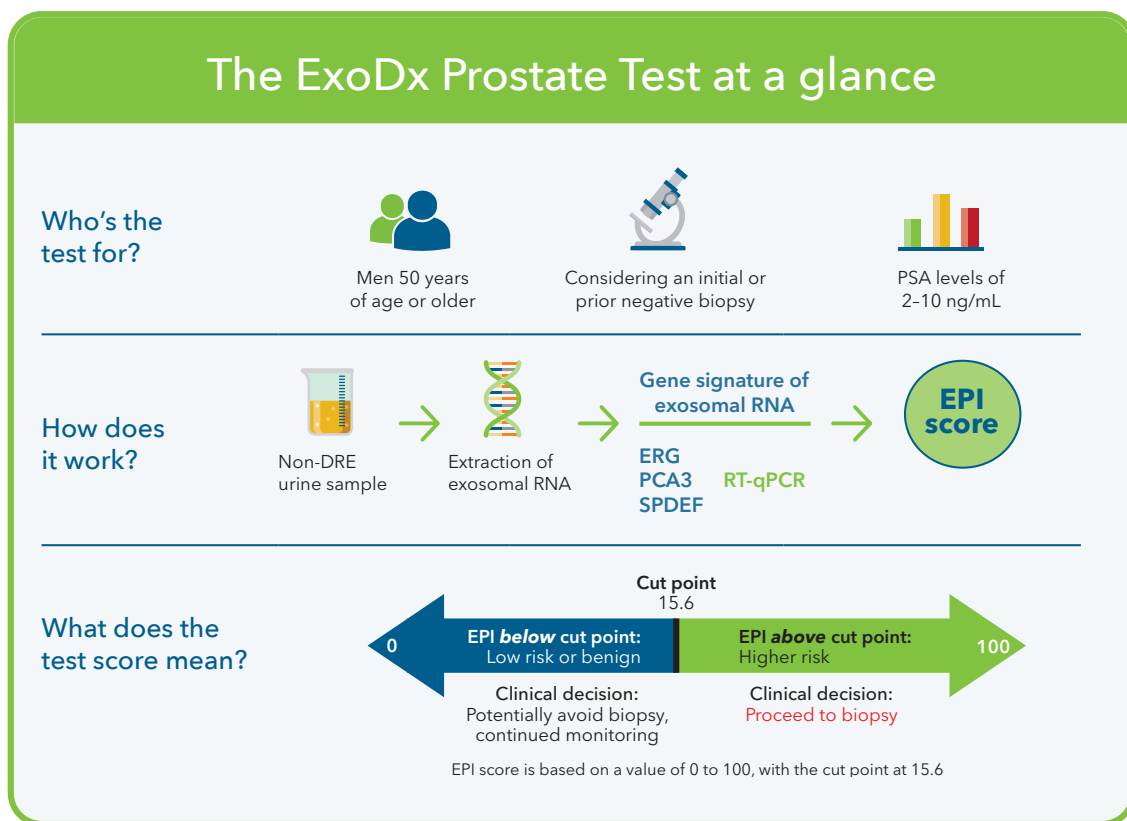

Comfort and convenience. Patients collect their sample right at home, and FedEx will pick up the specimen from their home and overnight it directly to the ExosomeDx Laboratory. A result is provided to the ordering physician 3 to 5 days upon receipt of the sample.

Using Telemedicine? The ExoDx Prostate test provides the patient and physician an additional tool in the shared biopsy decision.

Optimized office visits. When office space and patient appointment times are limited, the ExoDx Prostate At-Home Collection Kit provides an actionable result that helps inform both the physician and patient as they determine the biopsy decision in a virtual environment.

Greater confidence. The ExoDx Prostate Test can provide key input in the decision to proceed to or defer the prostate biopsy procedure.

Improved workflow. In situations where patients have already provided a urine sample during an in-office visit, patients can now use the At-Home Collection kit to collect a sample in the comfort and convenience of their home – meaning a reduced workload on the medical staff.

The 2019 NCCN guidelines include the ExoDx Prostate test (EPI) for early detection in men for both initial and prior negative biopsy.*
