

The ExoDx™ Prostate Test

AT-HOME COLLECTION KIT

The **ExoDx Prostate Test** is a simple, non-invasive urine test that can help discriminate the risk of aggressive prostate cancer (defined as Gleason Score ≥ 7).

Now the test is available as an **At-Home Collection Kit** that can be initiated by a HIPAA-compliant online order signed by the physician, then sent directly to the patient's home for self-collection.

Here's how it works:

For **current** healthcare providers:

Simply scan the code to complete the HIPAA-compliant electronic order form. That's it!

And remember,
there's **no extra cost** for
the At-Home
Collection Kit!

For **new** healthcare providers:

Follow the steps below. Need assistance? Scan the code to schedule a meeting.

- Contact our Client Services Team at **844.396.7663, Option 3**, then **Option 2**, for your unique site ID.
- Then populate the patient's name, address, and DOB – we do the rest!

Test results, fast and easy

Results of the ExoDx Test will be sent electronically through a HIPAA-compliant, secure online portal 3 to 5 days from sample receipt. Need help interpreting the results? Our experts are available 5 days a week.

Getting Started with the ExoDx Prostate Test

Benefits of the ExoDx Prostate Test At-Home Collection Kit:

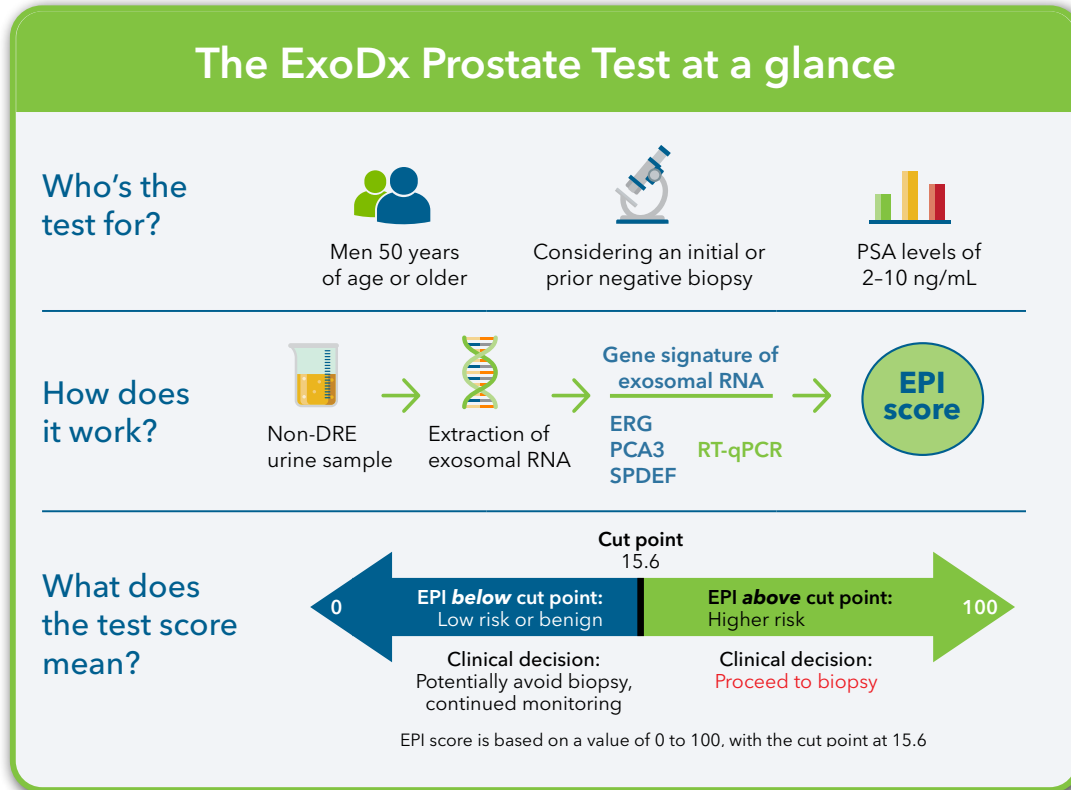

Comfort and convenience. Patients collect their sample right at home, and FedEx will pick up the specimen from their home and overnight it directly to the ExosomeDx Laboratory. A result is provided to the ordering physician 3 to 5 days upon receipt of the sample.

Using Telemedicine? The ExoDx Prostate test provides the patient and physician an additional tool in the shared biopsy decision.

Optimized office visits. When office space and patient appointment times are limited, the ExoDx Prostate At-Home Collection Kit provides an actionable result that helps inform both the physician and patient as they determine the biopsy decision in a virtual environment.

Greater confidence. The ExoDx Prostate Test can provide key input in the decision to proceed to or defer the prostate biopsy procedure.

Improved workflow. In situations where patients have already provided a urine sample during an in-office visit, patients can now use the At-Home Collection kit to collect a sample in the comfort and convenience of their home – meaning a reduced workload on the medical staff.

The 2019 NCCN guidelines include the ExoDx Prostate test (EPI) for early detection in men for both initial and prior negative biopsy.

Help give your patients peace of mind. Find out more today!
